DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10 November 2008 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Applicant's attorney, Mr. J Kevin Parker, on 6 April 2009.

The application has been amended as follows:

- Claims 5 and 9 were cancelled.
- Claim 1 has been amended as follows:

1. (Currently Amended) An implantable cardiac rhythm management device, comprising:

a sensing channel for sensing an electrogram signal representing cardiac electrical activity and circuitry for generating a chamber sense when the electrogram signal exceeds a specified threshold;

one or more stimulation channels for delivering electrical stimulation to a subject's heart;

an activity sensor for measuring an activity level;

a controller programmed to detect a tachyarrhythmia from the rate at which chamber senses are generated and to cause delivery of anti-tachyarrhythmia therapy through one or more of the stimulation channels upon detection of a tachyarrhythmia;

a telemetry interface by which the controller may communicate with an external device; ~~and,~~

wherein the controller is programmed to disable the delivery of anti-tachyarrhythmia therapy for a specified time interval upon receipt of a temporary suspend command from the external device via the telemetry interface and to re-enable the delivery of anti-tachyarrhythmia therapy upon expiration of the specified time interval; and,

wherein the controller is programmed to re-enable delivery of anti-tachyarrhythmia therapy before expiration of the specified time interval upon measurement of an activity level above a specified threshold value.

- Claim 8 has been amended as follows:

8. (Currently Amended) The device of claim 6 ~~further comprising an activity sensor for measuring an activity level and~~ wherein the resume command is generated upon measurement of an activity level above a specified threshold value.

- The following claims, 20-22, were added:

20. (New) The device of claim 16 wherein the controller is programmed to disable the delivery of anti-tachyarrhythmia therapy for a specified time interval upon

receipt of a temporary suspend command from the external device via the telemetry interface and to re-enable the delivery of anti-tachyarrhythmia therapy upon expiration of the specified time interval.

21. (New) The device of claim 20 wherein the controller is programmed to re-enable delivery of anti-tachyarrhythmia therapy before expiration of the specified time interval by actuation of the magnetic switch.

22. (New) The device of claim 18 further comprising a magnetic switch interfaced to the controller which is actuated by application of a magnetic field and wherein the controller is programmed to re-enable delivery of anti-tachyarrhythmia therapy by actuation of the magnetic switch.

Allowable Subject Matter

4. Claims 1-4, 6-8, and 10-22 are allowed.
5. The following is an examiner's statement of reasons for allowance: the prior art fails to teach alone or in combination the features of the claimed invention, particularly the programmed controller. Secondly, The 103(a) rejection of Lindberg (US Patent no. 5,370,666) in view of Von Arx et al. (US Patent no. 6,985,773), and Goedeke (US Patent no. 6,263,246) is deemed improper since Von Arx et al. is disqualified for use under 103 (c) due to its status as a commonly owned 102 (e) publication.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Seim et al. (US Patent no. 6,895, 273) is a commonly owned 102(e) date patent that recites a method and device for temporarily suspending tachyarrhythmia therapy. However Seim et al. not teach or suggest the features of the magnetic actuation switch, nor the activity sensor, for aiding in the suspension or re-enablement of the tachyarrhythmia therapy.
